

Start in CHO, Stay in CHO

Why use HEK293 when a straight path with CHO is available from development to GMP manufacturing?

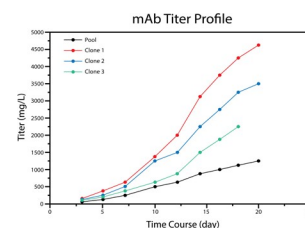

LakePharma's proprietary CHO platforms offer high performance for transient protein production, stable cell line development, and GMP manufacturing.

- TunaCHO™ transient platform has yields as high as >1 g/L
- CHO-GSN™ stable platform, a glutamine synthesis (GS) knockout line, offers robust performance as high as 7 g/L

All platforms are ready for commercialization, and 100% royalty-free licensing option is available.

TunaCHO process is consistent in production yield.

CHO-GSN platform exhibits high productivity.
